

## 1W CONVECTION COOLED

## DC-HVDC CONVERTER

The AG Series is a broad line of ultra-miniature DC to HVDC converters that sets an industry standard in high voltage miniaturization. This unique package occupies less than one tenth of a cubic inch of volume and an extremely low profile of only 0.128 inches (3.25mm) when mounted in from the top, or 0.152 (3.86mm) when mounted in from the bottom of the PCB. They can also mount off the PCB with 0.030" diameter pins. They are offered in 1 watt or 1.5 watt power ratings, with output voltages ranging from 100 volts to 6000 volts. The output is directly proportional to the input voltage and is linear from <math>0.7V</math> input to maximum input voltage. Output is load dependent. Isolation permits <math>\pm 500V</math> bias on output return. No external components or minimum load are required.

A separate high impedance control pin is standard and is designed for external error amplifier and/or DAC control in closed or open loop systems, or simply connect the control pin to the + input for proportional input to output operation. Use of a resonant, quasi-sinewave oscillator and fully shielded transformer result in clean, reliable high voltage conversion with inherently low ripple, EMI/RFI and input ripple current, making this product ideal for integration into noise sensitive equipment.

### Notes:

- Maximum output current is available at maximum rated output voltage, and derates linearly as input voltage is decreased.
- Output Voltage is load dependent. Under light or no-load conditions, reduce the Input Voltage so maximum rated Output Voltage is not exceeded.
- Specifications are after 30 minute warm-up, full-load at 25°C, unless otherwise noted.
- Proper thermal management techniques are required to maintain safe case temperature at maximum power output.
