

3W CONVECTION COOLED

DC-HVDC CONVERTER

The E Series is a broad line of small, component level high voltage converters in a PCB mount package that provides up to 3 Watts continuous output power for models up to 7kV (2 Watts for models >7kV). These HV converters feature low ripple and noise, and low EMI/RFI by utilizing a quasi-sinewave oscillator, excellent filtering techniques and a fully enclosed pot-core transformer. The output voltage is directly proportional to the input voltage and is linear from approximately 0.7 volts to maximum input.

The galvanically isolated output allows for user selectable output polarity. Dual output models with a center-tap pin provide both positive and negative outputs from one module. Some models are provided with an external aluminum box for increased EMI/RFI shielding and rugged mounting. Proven design techniques, classic topology and custom encapsulation formula come together to provide engineers with a clean, reliable, low cost, and easy to integrate high voltage solution.

Notes:

- Maximum rated output current is available at maximum rated output voltage and derates linearly as input voltage is decreased.
- Output voltage is load dependent. Under light or no-load conditions, reduce the input voltage so maximum rated output voltage is not exceeded.
- Specifications after 30 minute warm-up, full load, at 25°C unless otherwise indicated.
- Proper thermal management techniques are required to maintain safe case temperature at maximum power output.
- Ripple specification for center-tapped units applies to the voltage between the positive and negative output terminals.

External EMI/RFI Shield

An AB suffix is used to indicate an added external EMI/RFI Shield as shown above. These five-sided aluminum enclosures feature a durable, non-conductive black anodized finish. On models with outputs of 3kV or higher, special care must be taken to ensure adequate spacing and insulation between the metal can and the high voltage output. Single sided layout, encapsulation, or conformal coating may be required. Case grounding studs must be connected to ground. Case ground is not connected to (-) Input.
